IVO PAVLOV

(425) 408-2153 pavlov.ivo@gmail.com **PORTFOLIO** **LINKEDIN**

SKILLS

Ruby, Rails, React, Python, Redux, GraphQL, AWS, JavaScript, CoffeeScript, Backbone.js, Docker, Node.js, Express, MongoDB, HTML, CSS, SQL, Git, iWorks

EXPERIENCE

Trakstar, a part of Mitratech Holdings Inc. - **Software Engineer** August 2021 - Present

- **Fullstack engineer** implementing new backend features, frontend views, and unit testing for client facing code
- Implement complex feature-requests from **business-critical clients**, ensuring zero regressions via **Test Driven Development**
- Bug fixes for **new and legacy Rails** framework, React components, and Backbone.js controllers
- Developing, expanding, and improving **REST-ful API** for external and internal services
- Upgraded application architecture: framework versions, os dependencies and deployment repositories using **AWS, Chef,** and **Terraform**
- **Scope, plan, and develop** upcoming work and new features using one sentence request from Product team as a guide
- Provided feedback for visual and business logic in **cross-functional dialog with design team and User Acceptance Team**
- Mentorship of junior developer and helped onboard new team members

Starbucks - Software Development Engineer (Consultant via Sogeti/Capgemini) January 2021 - May 2021

- Improved **UX/UI** as **Front end engineer** with **React.js**, expanding on internal tools built around **AWS Connect**
- Executed **story generation and pointing** and **sprint planning (Agile)** and completed **Proof of Concept** stories
- Documented and implemented changes in Confluence: DRY up code, change UI elements from React-Bootstrap to Google Material-UI library, swap custom components to provided internal pattern library
- **Implemented API** for **feature flag** toggle with failsafe to allow for dynamic function enablement
- Updated React.js class based components and incorporated **functional components** to improve UI

Liberty Mutual Insurance - Software Development Engineer (Consultant via Sogeti/Capgemini) May 2020 - December 2020

- Performed **Full stack development** with **Ruby on Rails**, **React.js**, **AWS Aurora PostgreSQL**, set up in a **Docker** container
- **Expanded API** with new endpoints, and updated existing API calls
- **Authored API** call to **generate business and publish PDF documents**, applying business rules onto backend data structures and parsing **XML requests**
- Created and updated **RSpec** and **Jest unit tests** to keep tests current on both frontend and backend
- Authored **RSpec** and **Jest unit tests** to increase coverage to 90+% for a newly authored internal web application
- Implemented CSV document generation, using Ruby, on **AWS Lambda** for FCS team
- Attended daily SCRUM/Agile standup meetings and developer check-ins
- Utilized **CloudForge/Jira/Bamboo/BitBucket** for workflow

Production Associate II

Blue Heron Biotech May 2011 - May 2019

- Improved gene-synthesis production process efficiency and reduced human error through data-parsing scripts
- Worked the entire production, and quality control, process and trained new employees

PROJECTS

Picto-gram (Ruby / Rails, PostgreSQL, React, Redux, AWS, Docker) github

An Instagram clone; users can upload, view, and comment on uploaded pictures

- Used **model level validations** to require complete input from user on account creation along with useful **error rendering**
- Applied custom routes and **user authentication** on both backend and frontend to prevent unauthorized access to protected routes and site features
- Utilized **RESTful API** endpoints and **AJAX** requests for user generated content
- Integrated **AWS S3 buckets** for object storage service to allow users to upload and view images on each post

EDUCATION

Web Development - *App Academy, 1500+ hour curriculum with < 3% acceptance | Spring 2019*

BS Molecular Genetics and Cell Biotechnology - *Washington State University | 2006 - 2010*
